

Phylogenomic context of the siphonophore lineages

Metamycoplasmataceae: 21-tip clade from the 483-tip bac120 tree; branch lengths retained

■ Siphonophore MAG ■ External host-associated genome ■ GTDB r220 reference

Node labels: FastTree local support, not bootstrap percentages. Root support = 0.999. [dup.] The same assembly GCA_929200685.1 occurs as both an external input and a GTDB reference.
